SUMMARY

Software engineer with hands-on experience building real-world applications. Comfortable working with modern technologies, including emerging AI tools, to create practical solutions. Always learning and looking for better ways to make software more efficient and useful.

TECHNICAL SKILLS

Languages: HTML/CSS, JavaScript, Python, Java, PHP, C++, Bash, Lisp

Frameworks/Libraries & Tools: React, Node.js, NumPy, TensorFlow, Selenium, Puppeteer

Database: PostgreSQL, MySQL, MongoDB, SQLite, OpenSearch

AI/ML: LLMs (OpenAI, Anthropic, Gemini, Llama, Local), RAG Pipelines, Embeddings, Vector Databases, LangChain, Ollama

Cloud/DevOps & Other: AWS, Google Cloud, Docker, Kubernetes, CI/CD, REST APIs, Git, Agile, Android

EXPERIENCE

Kinary, Inc.

April 2025 - Present

Software Engineer (Contract)

- Architected a real-time transcription and summarization prototype for 60 minute meetings using Whisper and Llama 3 with token chunking and speaker diarization, achieving a 95% transcription accuracy.
- Built a headless Puppeteer/Selenium bot to join scheduled Google Meet sessions under 30 seconds, detect active speakers, and record audio streams, designed to scale to hundreds of sessions per week.
- Prototyped a RAG pipeline using OpenAI embeddings and OpenSearch vector indices, enabling real-time semantic search and retrieval across thousands of indexed documents for context-aware LLM prompts.

eDigital

June 2023 - February 2025

Backend Python Developer

- Engineered a YOLO (You Only Look Once) powered screen detection system to accurately identify and interpret on-screen UI elements, reducing manual QA efforts and overhead.
- Deployed distributed IoT agents on Raspberry Pis with integrated cameras, creating a scalable testbed for automated screen interaction.
- Built an agent that autonomously navigated HDMI-enabled devices, dynamically traversing multi-screen UI flows (home, menu, input, results, playback), reducing manual testing effort while adapting to constantly changing content.
- Developed and maintained a custom Selenium-based library wrapper to streamline data scraping from streaming platforms, reducing client data retrieval time by ~80% and automating manual processes.
- Provided first-tier technical support, resolving automation and data accuracy issues for clients.

EDUCATION

CUNY - Queens College - Bachelor of Arts, Computer Science | Honors | Dean's List | GPA 3.83
